

# Digital Heritage in the New Knowledge Environment:

Shared spaces & open paths  
to cultural content

31. 10. 08 - 02. 11. 08

## Preliminary Programme

New digital media and the robust developments of web 2.0 have enabled and are continuously shaping a fluid and dynamic knowledge environment. Collaborative and creative ways of web-based authoring, editing and publishing, allow for the co-creation of content, the dissemination of knowledge and the self-regulation of social networks. Researchers, experts and practitioners are already taking advantage of these new possibilities while at the same time are concerned about the longevity of applications and the preservation of digitised or “born digital” cultural content. Issues of interoperability, accessibility and public use of digital content have become urgent for contemporary museums, archives and heritage institutions.

The Directorate of the National Archive of Monuments, under the General Directorate of Antiquities and Cultural Heritage of the Hellenic Ministry of Culture, undertakes and supervises digital projects for collections and monuments nationwide. Given its coordinating role, the Directorate welcomes you to the three day presentation and exchange of views and ideas on the challenges of digital heritage focusing on ways of convergence, collaborative practices and potential fields of common action. By providing an opportunity to share ideas and experience the Conference intends to promote a dialogue that will address both knowledge preservation and diffusion.

### **Sessions:**

**Redefining the research field:** digital applications and new media in archaeological practice and heritage management (databases and information systems, audiovisual media, GIS, etc.)

**Exploring the web 2.0 potential:** collaborative authoring and instant-publishing tools (e.g. blogs, wikis), social networks, audiovisual content, copyright issues etc.

**Widening the audience:** new roles and ways of producing and sharing knowledge for the public.

**Shaping a common language:** documentation standards, metadata, compatibility, interoperability, data mining and knowledge engineering, language support, etc.

**Theorizing Digital Heritage:** critical / theoretical approaches to cultural heritage and digital culture.
